ACREAGE AND LIVE STOCK  
RETURNS

OF

GREAT BRITAIN

With SUMMARIES for the UNITED KINGDOM.

Presented to both Houses of Parliament by Command of His Majesty.

LONDON:

PRINTED FOR HIS MAJESTY'S STATIONERY OFFICE,  
BY WYMAN AND SONS, LIMITED, FETTER LANE, E.C.

And to be purchased, either directly or through any Bookseller, from  
WYMAN AND SONS, LTD., FETTER LANE, E.C.; and  
32, ABINGDON STREET, WESTMINSTER, S.W.; or  
OLIVER AND BOYD, EDINBURGH; or  
E. PONSONBY, 116, GRAFTON STREET, DUBLIN.

1906.

[Cd. 3281.] Price 5d.

# SALE OF GOVERNMENT PUBLICATIONS.

The under-mentioned Firms have been appointed sole Agents for the sale of Government Publications, including Parliamentary Reports and Papers, Acts of Parliament, Record Office Publications, &c., &c. (excepting Ordnance Maps and Geological Maps and Memoirs, the Hydrographical Works of the Admiralty, the Journal of the Board of Agriculture, and Patent Office Publications), and all such works can be purchased from them either directly or through retail booksellers, who are entitled to a discount of 25 per cent. from the selling prices:—

IN ENGLAND:—Messrs. WYMAN AND SONS, LTD., Fetter Lane, E.C.

IN SCOTLAND:—Messrs. OLIVER AND BOYD, Edinburgh.

IN IRELAND:—Mr. E. FOXSONBY, 116, Grafton Street, Dublin.

Hydrographical Works of the Admiralty are sold by Mr. J. D. POTTER, 145, Minories, E. The Journal of the Board of Agriculture is sold by Messrs. LAUGHTON AND Co., Ltd., No. 2, Wellington Street, Strand, W.C.

Patent Office Publications are sold at the Patent Office.

The Publications of the ORDNANCE SURVEY and of the GEOLOGICAL SURVEY can be purchased from Agents in most of the chief towns in the United Kingdom, through any Bookseller, or from the Director-General of the Ordnance Survey, Southampton, or in the case of Ireland, from the Superintendent, Ordnance Survey, Dublin. In addition, Ordnance Survey Publications can be obtained through Head Post Offices in towns where there are no accredited Agents, and Small Scale Maps are, as a rule, procurable at Railway Bookstalls in England and Wales.

The following is a list of some of the more important Parliamentary and Official Publications recently issued:—

## Parliamentary:

### Statutes—

*Public General Acts, 1906.* In course of issue.

*Local and Personal Acts, 1906,* in course of issue; 3d. per 4 pp.

*Army Act—Consolidation—including amendments to 1906.*

Price 1s. 2d.

*Public General, Session 1905.* With Index, Tables, &c. Cloth.

Price 3s.

*Index to Local and Personal Acts, 1801-1899.*

Price 10s.

*Index to Local and Personal Acts, 1900-1905.* Each year may be purchased separately.

*Second Revised Edition. 1235-1836.* XVI. Vols.

Price 7s. 6d. each.

*Revised Editions.* Tables showing subsequent Repeals, effected by Acts of Session

2 Edward VII. 1902.

Price 6d.

*Statistics in Force. Chronological Table and Index of.* 21st Edition. To the end of the

Session 5 Edward VII. (1903). 2 Vols.

Price 10s. 6d.

*The Statutory Rules and Orders revised.* Statutory Rules and Orders, other than those of

a Local, Personal, or Temporary Character, in force on December 31, 1903. Vols.

I. to XIII.

Price 10s. each.

*Statutory Rules and Orders other than those of a Local, Personal, or Temporary*

*Character.* With a list of the more important Statutory Orders of a Local Character,

arranged in classes; and an Index. Roy. 8vo. Boards. Issued in 1890 to 1904.

Price 10s. each.

*Statutory Rules and Orders in force on 31st December, 1903.* Index to.

Price 10s.

# BOARD OF AGRICULTURE AND FISHERIES.

## AGRICULTURAL STATISTICS, 1906.

### REPORT TO THE SECRETARY OF THE BOARD OF AGRICULTURE AND FISHERIES.

SIR,

I HAVE the honour to submit the Returns of the Acreage under Crops and the Numbers of Live Stock in Great Britain on June 4th last, collected, on behalf of the Board, by the Officers of Inland Revenue; together with the Returns for the Isle of Man and the Channel Islands, which have been obtained by the co-operation of the Lieutenant-Governors concerned. The Department of Agriculture and Technical Instruction for Ireland have supplied a summary of the Returns collected under their direction, which enables the totals to be given for the United Kingdom in Table XII.

I propose to make a slight alteration in the mode of publication of the Agricultural Statistics issued by the Board. Reference was made by Major Craigie, in his last Report, to the growth of the annual volume of the Agricultural Returns, from 53 pages in 1867 to 368 pages in 1905, and in view of the increasing demand for statistical information it is not to be expected that this extension has reached its limit. It is thought, therefore, that it may be more convenient to issue the volume in four parts, which may, if desired, be bound together to form the whole volume as before, or may be separately available for those who wish to possess only some of the tables. The present issue, which forms Part I. of the 41st volume of the Agricultural Returns of Great Britain, will be followed, as the figures become available, by Part II. containing Returns of the Produce of Crops, Part III. containing statistics of Supplies and Prices of agricultural commodities, and Part IV. containing

Change in  
mode of  
publication.

statistics of the Agriculture of the Colonies and Foreign Countries, with an Index to the whole volume.

Arrangement  
of Tables.

It will be observed that certain minor alterations in the arrangement of the Tables have been made in the present issue. Table I. is now confined to Great Britain, so as to enable the changes of the year to be succinctly shown, and the supplementary figures, which enable the totals for the United Kingdom to be made up, are given in Table XII. In Table II. it will be observed that more crops are given in detail, while those which are not there separately distinguished will be found in Table VI. The acreage of "seeds" and of permanent grass, respectively, intended on the 4th of June for hay or not for hay, will be found in a convenient form in Tables III. and IV.

Issue of  
Returns.

The totals for Great Britain of the Returns now published were issued in the usual Preliminary Statement on August 27th, and a county summary of the principal figures was distributed during September to occupiers of land

#### CULTIVATED AREA.

Total Area.

The latest measurements of Great Britain, supplied by the Ordnance Survey, are given in detail in Table V., the total extent of Land and Water (exclusive of foreshore and tidal water) being 56,788,366 acres, in addition to 141,263 acres in the Isle of Man, 28,717 acres in Jersey, and 15,774 acres in Guernsey, &c. The general utilisation of the land, so far as the Returns made to this Department account for it, may be shown briefly as follows:—

	ENGLAND.	WALES.	SCOTLAND.	GREAT BRITAIN.
	Acres.	Acres.	Acres.	Acres.
TOTAL LAND AREA (excluding water)	32,382,000	4,749,000	19,070,000	56,201,000
Woods and Plantations (1903)	1,716,000	184,000	868,000	2,768,000
Mountain and Heath Land used for grazing	2,371,000	1,288,000	9,082,000	12,741,000
Cultivated Land:				
Arable . . .	10,783,000	806,000	3,433,000	15,022,000
Pasture . . .	13,817,000	1,988,000	1,440,000	17,245,000

The area of land not accounted for in the above Table amounts to about 15 per cent., and comprises not only the large tracts

covered by towns and cities—many of them occupying districts which were at one time very profitable for farming—by railways, mines and industrial premises, but also those unnumbered pieces of land under cultivation which, not exceeding one acre in extent, are excluded from the Returns, as well as such waste and barren land as is incapable of affording even scanty sustenance for stock.

The varying extent to which different parts of the country are farmed is shown in Table XI. Thus in Cambridge, Huntingdon, Lincoln, the East Riding, Leicester and Rutland, 90 per cent. of the total surface is under cultivation either in plough or pasture, while on the other hand in some of the Scotch counties, *e.g.* Argyll, Inverness, and Ross and Cromarty, the cultivated land, so returned, occupies no more than about 6 or 7 per cent., although it is supplemented by vast areas of grazings, amounting in some cases to more than 70 per cent. of the total area of the county.

The cultivated, or farmed, land—entered in the Tables as the Acreage under Crops and Grass—was reduced in 1906 by 20,000 acres, in continuation of the process which has been annually recorded for the past fifteen years. The line dividing permanent pasture from mountain and heath land used for grazing is in the nature of things somewhat wavering, but, in recent years at any rate, the tendency exhibited has been so consistent that there can be no doubt that an appreciable restriction of the area devoted to Agriculture has in fact taken place, mainly, it may be assumed, by reason of the constant encroachment of urban aggregations with their manifold demands for more land. Without attempting to press the absolute figures too closely there is little fear of exaggeration in the statement that something like half a million acres in Great Britain have been diverted during the past fifteen years from agricultural to residential or industrial use.

While the farmed area slowly but steadily diminishes, the conversion of arable land into pasture continues with equal persistency and much greater speed. This has been frequently referred to in previous Reports, and little remains to be said on so well-worn a theme. It may be noted, however, that in 1906 the withdrawal of land from the plough, which amounted since the preceding year to 67,244 acres in England, did not occur in either Wales or Scotland, where there

Arable and  
Pasture.

was in both instances a slight increase. The marked difference in this respect North and South of the Tweed has been frequently pointed out. In England and Wales the proportion of the land returned as under crops and grass which is under the plough is now 42 per cent., while in Scotland it is 70 per cent. Thirty years ago the proportion was 53 per cent. in England and Wales, and since then it has steadily declined at the average rate of 100,000 acres per annum. In Scotland the proportion was nearly 76 per cent. in 1877, and up to 1890 practically no diminution was recorded, although since that date there has been a loss of about 6 per cent.

Owner-  
farmed Land.

The proportion of the cultivated land which is farmed by its owners (as shown in Table VII) is in the whole of Great Britain 12·4 per cent., being in England slightly higher than in Scotland, and about 2½ per cent. higher than in Wales. Since 1888, the year after returns giving this information were first collected, the proportion of owner-farmed land has steadily declined, except during the years 1893-7, when there was practically no alteration. As the highest proportion recorded (in 1888) was only 15 per cent., the total change has been relatively small, affecting in the aggregate about 900,000 acres, but the consistency of the movement suggests that some influences have been working in the direction of the tenancy rather than the occupying ownership of agricultural land. Two causes suggest themselves, both of which may have been influential. The elimination by economic pressure during the past 30 years of the occupying owner, or yeoman farmer, has been frequently commented upon in the Reports of Agricultural Commissions and elsewhere. When, by foreclosure of the mortgage or otherwise, he disappears his holding commonly passes to an owner who lets it, and thus transfers it to the category of land occupied by tenants. Another cause tending, so far as these Returns are concerned, in the same direction, which may have operated, especially in later years, is one of which evidence would be more welcome. It is possible that landowners who had kept farms in hand, either from absolute inability to find tenants or from unwillingness to acquiesce in the lower terms on which alone farms can nowadays be let, have gradually obtained tenants and thus reduced the area returned as "occupied by owners."

The total number of holdings exceeding one acre in Great Britain is 510,833, which gives an average of slightly over 63

acres of cultivated land, not taking into account the rough grazings, which would in some districts—and especially in Scotland—make a material difference if they were included. The number and proportion of each of the four sizes of holdings in which the returns are grouped are as follows, the figures for each county being given in Tables VIII. and IX. :—

	1-5 ACRES.		5-50 ACRES.		50-300 ACRES.		ABOVE 300 ACRES.		TOTAL.
	No.	Per cent.	No.	Per cent.	No.	Per cent.	No.	Per cent.	No.
England - -	80,917	21·8	166,017	44·7	109,736	29·5	14,711	4·0	371,381
Wales - - -	10,279	17·0	31,71	52·5	18,022	29·8	411	0·7	60,425
Scotland - -	18,553	23·5	34,645	43·8	23,123	29·3	2,706	3·4	79,027
Great Britain	109,749	21·5	232,375	45·5	150,881	29·5	17,828	3·5	510,833

In considering the changes from one year to another in the number of holdings of each class, the contraction of the cultivated area, already alluded to, must be borne in mind. The reduction during the past three years by 1,552 of the total number of holdings included in these returns is perhaps more largely due to the utilisation of farm-land for other purposes than to the consolidation of small farms into larger ones. There appear, however, to be some slight indications of a tendency towards an increase in the medium-sized farms, and a reduction of the number both of the very small (i.e. 1 to 5 acre) and of the largest (over 300 acre) holdings.

#### CHANGES IN CROP AREAS.

The area under WHEAT in Great Britain in 1906 was 1,755,696 Wheat. acres, being 41,299 acres, or rather more than 2 per cent., less than in 1905, in which year it will be remembered there was a notable increase of over 400,000 acres. The area now recorded still exceeds the average of the preceding five years by nearly 120,000 acres. Only in England was any decline apparent, Wales and Scotland adding 395 and 1,440 acres respectively to their acreage. The reduction in the wheat area was general in each division of England except the Northern and North-Western, nearly every county of which showed an increase. The largest actual decreases were in Lincoln 5,364 acres, Norfolk 4,155 acres, Suffolk 3,475 acres, or about 3 per cent. in each case, and in Sussex 3,046 acres, or 6 per cent., these four counties accounting for more than a third of the total loss in England. Bedford, Essex, Gloucester, Northampton, Somerset and Worcester each recorded a decreased wheat area of about 2,500 acres, while nine other counties reported losses averaging some 1,500 acres. In the Northern and North-Western division, Lancaster increased its area

under wheat by 3,090 acres, or nearly 17 per cent., the North Riding by 2,768 acres, or nearly 10 per cent., Chester by 1,833 acres, or over 14 per cent., and Stafford by 1,508 acres, or 7 per cent. In Scotland, where the total addition to the wheat area amounted to 1,440 acres, or nearly 3 per cent., only five counties—Aberdeen, Berwick, Kincardine, Kinross and Perth—showed a decline, while there was an increase in all the remaining counties, 22 in number, where wheat is grown.

#### Barley.

BARLEY, for the first time since 1900, showed an increase, the actual addition being 37,574 acres, or 2 per cent. This was practically equivalent to the decline in wheat, but the area under barley still remains less by 90,000 acres than in 1904. During the past thirty years the cultivation of this crop has declined by about 660,000 acres, and it may be noted that it now covers almost precisely the same extent of land as wheat. The increase in 1906 was principally in England, where an addition of 29,421 acres, or about 2 per cent., was recorded; Wales returning 1,591 acres and Scotland 6,562 acres more, the latter being relatively the largest increase of the three countries. In England, 29 counties showed an increase, by far the largest addition in any single county being in Lincoln, the largest barley-growing county, where an increase of 11,896 acres, or about 6 per cent., was returned. The two counties next in importance, Norfolk and Suffolk, however, had a slightly diminished acreage under this crop. Hampshire had an increase of 2,772 acres, or over 9 per cent., and Nottingham one of 2,547 acres, or 8 per cent., while Salop, Stafford, Dorset, Durham, Devon, Cornwall and Gloucester each substantially extended their barley acreage. Essex, with a loss of 2,700 acres, or nearly 4 per cent., was the most noticeable exception to the general rule. Nearly every county in Wales had an increase, while in Scotland the gains and losses were fairly distributed, the largest additions being in Aberdeen 1,613 acres, Perth 914 acres, Forfar 906 acres, and Berwick 887 acres.

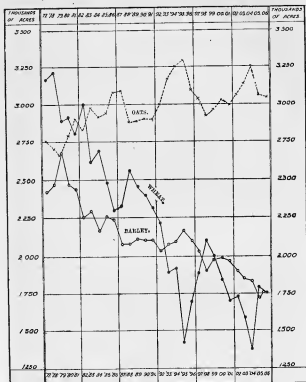

#### Oats.

The decline in the area under OATS, amounting to 8,450 acres, or 0.3 per cent., cannot be regarded as significant. The acreage is now 3,042,926 acres, or some 14,000 acres less than in 1902. This year's decline was confined to Wales and Scotland, mainly to the latter country, which lost 6,187 acres, Wales having a deficit of 2,819 acres, while England had a small increase of 556 acres. The changes were fairly distributed amongst the counties in England, 21 showing increases in their oat area and 22 recording decreases. The largest actual additions were in Norfolk 5,676 acres, Wilts 2,835 acres, Essex 2,317 acres, and Hertford 2,033 acres. Decreases occurred principally in the North Riding 3,197 acres, Salop 2,757 acres, Stafford 2,529 acres, Cornwall 2,412 acres, and Nottingham 2,029 acres. In Wales, three counties, Anglesey, Carnarvon and Glamorgan, alone showed increases, and in Scotland 22 counties contributed to the reduction of the acreage under oats. Amongst the Scottish counties which did not follow the general trend, Lanark was conspicuous with an addition of 1,338 acres.

#### Thirty Years' Changes.

It will be observed that, taking wheat, barley and oats together, there was a net reduction of 12,175 acres in Great Britain. The total acreage under these three crops collectively was in 1906 6,550,000 acres, as compared with 8,340,000 acres thirty years ago. In England during that period oats have replaced wheat or barley on about 400,000 acres, and in both Wales and Scotland, while all three crops have declined, oats have done so in a much less degree than either wheat or barley. The changes which have occurred year by year are recorded in Tables XIV. to XVII., but the relation of the three

crops and the yearly fluctuations in their area are indicated in the following diagram, wherein the thick line represents wheat, the thin line barley, and the broken line oats.

RYE in 1906 showed a gain of 2,611 acres, or 4·2 per cent. In England, Rye, the principal additions occurred in Chester, Stafford, the East and North Ridings, and Lincoln, while Hampshire and Wiltshire each lost nearly 700 acres. In Scotland several counties had considerable additions.

There was a large increase in the area devoted to BEANS, and a Beans and Peas. corresponding decline in PEAS, the increase of the former being 34,126 acres, or 13·4 per cent., and the decrease of the latter 21,256 acres, or 12·1 per cent. It is necessary to go as far back as 1892 to find an area as large as the 288,891 acres devoted this year to the cultivation of Beans, while the area under Peas is the lowest ever recorded. Of the total increase in Beans, 32,823 acres, or 96 per cent., occurred in England, every county, except Middlesex and Northumberland, recording additions, the largest of which were in Lincoln 5,600 acres, Essex 4,000 acres, Cambridge 2,300 acres, Suffolk 1,800 acres, and Northampton 1,700 acres, while in several other counties 1,000

acres were added. The decrease in Peas was practically all in England, where only ten counties recorded comparatively small increases. There was a large decrease in Lincoln, the chief pea-growing county, amounting to 8,200 acres, or nearly 28 per cent., while Norfolk, Essex, Kent, and Northampton had reductions of over 1,000 acres.

#### Potatoes.

POTATOES more than lost the area added in 1903, a decline of 42,552 acres, or 7 per cent., reducing the acreage to 565,921 acres, or very little in excess of the area returned in 1903. The large crop of last year, and the low prices subsequently prevailing, probably account for this diminution. The decrease was mainly in England, where it amounted to 38,257 acres, all but 9 counties sharing in the loss, and it was most marked in the chief potato-growing county of Lincoln, where the reduction amounted to 14,428 acres, or 18 per cent. The area under potatoes in Lincolnshire has steadily increased in each year from 1897, when it stood at 50,197 acres, to 1905, when it attained its maximum of nearly 80,000 acres, being an increase during that period of 29,367 acres, or 58 per cent. The loss this year practically reduces the area to the same as in 1900. Several other counties had relatively large decreases, such as the West Riding 3,487 acres, Cambridge 2,954 acres, and the East Riding 2,300 acres. The loss in Wales was only slight, but the decline which has been in progress since 1888 still continues, and in Scotland the diminution amounted to just over 4,000 acres, or nearly 3 per cent.

#### Turnips and Swedes.

The acreage under TURNIPS and SWEDES, for the second time on record, fell below 1,600,000 acres, but was slightly in excess of the area returned last year. The decline in the area devoted to these crops has been almost continuous since 1876. For 10 years, 1877 to 1886, the acreage stood at something over 2,000,000 acres but below 2,100,000 acres, the average area during the period being 2,028,000 acres; for the succeeding nine years, from 1887 to 1895, over 1,900,000 but under 2,000,000 acres were returned, the average area being 1,943,000 acres. Since 1895 the decline has been more rapid, and in the last 10 years 327,000 acres have been lost to these crops. In the present year both England and Wales exhibited small losses, reducing their acreage to the lowest on record, but Scotland adds 3,650 acres to the turnip and swede area or an 8 per cent. increase. The differences in England were evenly distributed, Hampshire claiming an addition of 2,172 acres, while Norfolk lost 2,818 acres, Suffolk 1,381 acres, and Salop 1,285 acres. In Scotland, Fife, Kirkcudbright, Perth, Dumfries and Forfar had the largest increases.

#### Mangold.

A considerable addition was made to the MANGOLD area, which was returned at 431,458 acres, as compared with 404,123 acres last year, the increase being 27,335 acres, or 6·8 per cent. Only once before has the present acreage been exceeded, viz., in 1902, when it was exactly 10,000 acres more than at present. There appears to have been comparatively little permanent addition to the acreage devoted to mangolds between the years 1876-1895, the average in the first five years of that period being 351,000 acres, while in the last five years of the period it was 350,000 acres, but in the two succeeding five-yearly periods the average area increased, in the former to 367,000 acres, and in 1901-5 to 409,000 acres. The increase this year was almost wholly in England, every county recording a larger area, the most notable increases occurring in Norfolk, Yorkshire and Salop.

CABBAGE continues to increase in area, the addition in 1906 amount-  
ing to 4 per cent. on the whole of the country. Most counties  
extended their acreage under this crop, the most prominent exception  
being Essex, where a loss of 8 per cent. was returned. Kent and Essex  
have now almost an equal area under this crop, and, together, account  
for one-sixth of the total acreage. Cabbage.

Very little change has occurred in the acreage returned under KOHL RABI.  
RABI, the increase not reaching 1 per cent., including an addition in  
Essex, which contains nearly one-fourth of the whole English acreage  
of this crop.

RAPK also showed little alteration from last year's acreage. England  
had a decrease of 908 acres, which was nearly balanced by the increases  
in Wales and Scotland. The most noticeable loss in any one county  
was in Hertford, where there was a deficit of over 600 acres. Rape.

VETCHES or TARES increased by 5,600 acres, nearly the whole of  
which was in England, the East Riding being credited with the  
addition of nearly 1,300 acres (or 37 per cent.). Vetches or  
Tares.

The reduction in LUCERNE which was noticed last year has been  
recovered. The increase principally occurred in England, nearly half the  
area gained being in Essex, the chief lucerne-growing county. Kent,  
the next largest county, however, showed a decline of 487 acres. Lucerne.

Among other crops, the area under CARROTS showed a small  
increase, and now stands at 12,845 acres; 3,287 acres were returned as  
under ONIONS, being an increase of nearly 16 per cent. on the  
previous year's figures. The area devoted to FLAX-growing fell from  
441 acres to 263 acres, nearly the whole of the decrease being found  
in the East Riding. Carrots,  
Onions, and  
Flax.

The area returned under HOPS was the lowest on record, the de-  
cline of 2,245 acres or 4.6 per cent. reducing the total to 46,722 acres,  
or more than 1,000 acres below the previous minimum acreage in  
1904. The decrease was general—Kent losing 1,359 acres, Hereford  
370 acres, and Sussex 268 acres. Hops.

The area under SMALL FRUIT again increased, and for the first  
time since the returns have been collected exceeded 80,000 acres. Each  
of the three divisions of Great Britain added to its Small Fruit  
area, but the gains were relatively greater in Scotland and Wales than  
in England. The largest actual and relative addition in England is in  
Norfolk, where 452 acres, or over 10 per cent., were brought  
under fruit in 1906. In Perth the increase was 258 acres, or 13 per  
cent., and in Lanark there was an extension of 121 acres, each of  
these counties now devoting over 2,000 acres to the growth of Small  
Fruit. Small Fruit.

Over 3,300 acres were added in 1906 to the area of ORCHARDS,  
nearly every county in England contributing to this result. Orchards.

Of the total area returned under CLOVER AND ROTATION GRASSES  
there was a net decrease of 36,772 acres, or slightly under 1 per cent.  
This decrease was mainly in the area returned as "Not for Hay,"  
which, separately considered, showed a deficit of nearly 40,000  
acres. In the area returned as "For Hay," England showed an  
increase, which was principally found in the East and North-Eastern  
counties and in the Midland and Northern counties, while a decrease  
was general in the South-Eastern and South-Western counties. The  
largest actual additions occurred in Norfolk 6,188 acres, Lincoln  
Clover and  
Rotation  
Grasses.

5,472 acres, and Suffolk 5,431 acres, while Hampshire had a decline of 4,562 acres, Wiltshire 3,659 acres, Somerset 2,472 acres, Dorset 2,464 acres, and Sussex 2,359 acres. In Scotland the chief losses occurred in Aberdeen, Forfar, and Perth. The decrease in Rotation Grasses not for hay was almost universal in England, only seven counties reporting increases. In Devon there was a decline of over 6,000 acres, while Cumberland lost nearly 4,000 acres, and Stafford and Wiltshire 3,000 acres each. Wales, on the contrary, had an increase of 3,000 acres, while the area in Scotland was practically the same as last year.

#### Permanent Grass.

A further addition was made to the area under PERMANENT GRASS, and the total, 17,244,734 acres, is the highest recorded. The area reserved for mowing this year showed an increase of nearly 100,000 acres, principally in England. Wales also had a small increase of 4,600 acres, but Scotland returned a decrease of nearly 4,000 acres. In England, the most noticeable additions occurred in Somerset 10,000 acres, Gloucester, Warwick and the West Riding, with some 7,500 each, Stafford with 7,000 acres, and Wiltshire, Leicester and Worcester with about 5,000 acres each.

Taking the Clovers and Rotation Grasses and the Permanent Grass together, the total area mown for hay and not mown is shown in the following summary :—

	1906.	1905.	Increase or Decrease.	
	Acres.	Acres.	Total.	Per Cent.
Clovers and Grass for Hay	6,977,200	6,877,806	+ 99,394	+ 1·4
" " not for Hay	14,708,280	14,800,206	- 91,926	- 0·6
Total	21,685,480	21,678,012	+ 7,468	+ 0·03

It appears, therefore, that while the total area was very little in excess of last year, a greater breadth was reserved for hay, in consequence no doubt of the reduced hay area and the shortage of the crop in 1905.

#### CHANGES IN LIVE STOCK.

##### Horses.

The number of HORSES included in these Returns reached in 1905 a total larger than ever previously recorded, but a decrease of 3,752 is shown in the present year's Returns. It will be noted that the reduction occurs in the agricultural horses (which include mares kept for breeding) and in the unbroken horses under one year, and that taking these classes alone there is a decline of 8,654. The increase of 4,902 in the unbroken horses of one year and above is in some degree a consequence of the previous year's increase, and is not therefore quite so satisfactory a set-off as the figures might suggest.

The number of unbroken horses under one year may be regarded as some index to horse-breeding in this country, and it is of interest to note that during the seven years prior to 1906 there appears to

have been a slow but steady increase. The following are the annual returns of unbroken horses under one year since 1896 :—

YEAR.	ENGLAND.	WALES.	SCOTLAND.	GREAT BRITAIN.
	No.	No.	No.	No.
1896	102,433	21,584	12,775	136,792
1897	98,001	21,320	12,668	131,989
1898	91,033	20,582	11,350	122,965
1899	93,920	21,242	11,447	126,609
1900	93,974	21,406	10,855	126,235
1901	94,860	21,244	11,747	127,851
1902	96,493	21,088	12,432	130,013
1903	98,206	21,851	13,465	133,523
1904	101,355	23,464	13,799	138,618
1905	102,048	23,331	14,302	139,681
1906	99,918	22,604	14,419	136,941

Two causes may be suggested for the maintenance of the horse-breeding industry in Great Britain, notwithstanding the rapidly-growing competition of motor vehicles. The imports of horses, which reached a maximum of 51,786 in 1900, have since decreased year by year until in 1905 they were only 13,711. Ireland also sent to Great Britain on an average during the past six years about 9,000 horses less per annum than in the previous six years. The figures available are not sufficiently complete to allow of a precise calculation, but they seem to indicate that for the past few years there has been a somewhat smaller supply of horses from extraneous sources and a rather larger supply from home breeding, but that, on balance, the numbers available in the country for general purposes have probably been diminishing since 1900. If the reduction in the number of young stock in 1906 is to be regarded as significant it may perhaps indicate that a limit has been reached, and that the development of mechanical means of road locomotion is beginning to check the breeding of horses in Great Britain.

Reverting to the local changes shown in this year's Returns, it may be observed that the greater part of the decrease of horses occurred in England, Wales indeed showing on the whole a very slight upward movement. The most considerable losses were those of Lincoln 1,235, the North Riding 601, and Cumberland, 504, while Somerset, Hampshire, and Carnarvon afford instances of a noticeable movement in the other direction. The increase already referred to in unbroken horses of one year and above was by no means uniform, as many as thirty-seven of the eighty-eight counties showing a falling-off in this class. As regards unbroken horses under one year old, the position was exactly reversed, increases in thirty-seven counties being insufficient to prevent a decline of 2,740 in the country generally. Devon and Lincoln, with losses of 528 and 480 respectively, showed the greatest changes.

The steady increase in the number of CATTLE which has taken place in Great Britain since 1902 was again continued this year, and with the addition of 23,836 to their number the herds of the country for the first time exceeded seven million head. It must be noted, how-

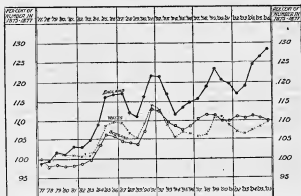

ever, that the increase only occurred in England and Wales; the Scottish Counties, with three exceptions (Aberdeen, Wigtown and Clackmannan), exhibiting more or less considerable reductions. Foremost in this respect were the eastern counties of Haddington, Forfar, Berwick and Roxburgh. Even in England thirteen counties showed decreases in the number of their cattle, but it is of some interest to note that this backward movement is only significant in the four northern counties of Northumberland, Cumberland, Durham and the North Riding, and in Stafford. These losses were far outweighed by substantial gains in other counties, prominent amongst which stand Devon 5,773, Suffolk 5,168, Essex 4,773, and Hampshire 4,214. With the exception of Merioneth and Radnor all the Welsh counties showed an increase. The increase in the total number of cattle in Great Britain masks a somewhat serious decline of 42,345 (or 3 per cent.) in the number under one year old. The heaviest losses in this category occurred in Somerset 2,950, Gloucester 2,755, Salop 2,255, Chester 2,253, Norfolk 2,088, and Stafford 2,036. Only nine counties in England and Wales, and Clackmannan alone in Scotland, furnish exceptions to the general decrease in cattle under one year, which is perhaps the least satisfactory feature of the present year's live-stock statistics.

As regards older cattle, cows and heifers showed a slight falling off in Scotland, and a considerable advance in England and Wales. The net increase of 31,019 (1·1 per cent.) in Great Britain brought the total to 2,738,411, the highest figure yet attained. The counties where the largest increases were recorded are Hampshire 3,419, Lancaster 3,138, Essex and Devon.

In the two remaining classes of cattle, comprising those over one year, exclusive of cows and heifers in milk or in calf, the general movement was upward in England and Wales,—the northernmost counties of Northumberland, Cumberland and Durham furnishing conspicuous exceptions—and downward in Scotland, where Aberdeen and Wigtown alone showed any marked growth in numbers. The net result was an increase of 35,162 in Great Britain as a whole.

Thirty Years  
Increase of  
Cows.

One of the most satisfactory features indicated by the Returns of recent years has been the general and, in England relatively rapid,

increase in the number of cows and heifers in milk and in calf, largely attributable, it may be assumed, to the ever-growing requirements of the milk trade. It may be of interest to show, graphically, the course of the somewhat remarkable changes which have taken place in the number of cows and heifers in milk and in calf in England, Wales and Scotland respectively, during the past thirty years. The actual figures represented will be found in Tables XIX. to XXII. They are shown on the diagram (p. 16) in relation to the average of the three years 1875-7, which is taken as 100, the figures for each subsequent year being shown as percentages of that average in the curves for each country. The English figures are shown by a thick line, the Welsh by a dotted line, and the Scottish by a thin line.

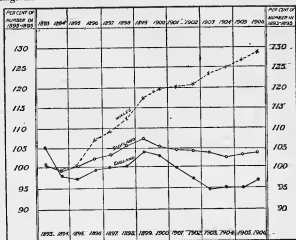

There is an increase of 163,164 (0·6 per cent.) in the number of Sheep. SHEEP enumerated this year. Except in Wales, however, the local changes exhibit a lack of uniformity. Thus, in England, while the West Riding, Kent and Salop showed large increases, the East Riding, Suffolk and Norfolk recorded smaller, but, nevertheless, considerable decreases. The net gain in England was 141,909, and in Wales 51,128. In half the Scotch counties there were increases, amounting in one case (Aberdeen) to over 10,000 head. Heavy losses, however, in the remaining counties, particularly Perth 10,019, Shetland 8,863, Argyll 8,475, and Lanark 6,715, reduced the number of sheep in Scotland nearly 30,000 below the total of 1905.

Turning to the detailed figures for the three classes of sheep enumerated, it is to be observed that the number of Ewes kept for breeding increased in nearly every part of Great Britain, the only noteworthy exceptions being Suffolk, Norfolk, and Dorset in England, Cardigan in Wales, and Shetland, Perth and Argyll in Scotland.

As regards sheep of one year and above, other than ewes, a small increase in Wales was rather more than set off by a decrease in England, while a more serious decline of 47,000 appeared in Scotland. The county figures showed a remarkable lack of uniformity; thus, Lincoln had an increase of over 20,000 sheep of this class, while the neighbouring East Riding of York showed a diminution of exactly 26,000 head. Other large decreases were those of Northumberland 14,388, Berwick 11,410, Cumberland, the North Riding and Fife. In Nottingham, on the other hand, an increase of 11,050 appeared.

In the case of lambs there was a satisfactory addition of 86,467 (0·8 per cent.) to last year's total. In the North of England especially, and in the Midland counties, the lambing season appears to have been almost without exception satisfactory, large increases occurring in the West Riding 17,162, Northumberland 16,042, Cumberland 10,800, the East Riding, Stafford and Lancashire. On the other hand serious declines appeared in the important Eastern counties of Norfolk 13,594, Lincoln 9,485, and Suffolk 8,969, while south of the Thames Kent alone showed an increase (of 13,409), all the other counties from Surrey to Cornwall experiencing a more or less serious diminution. Most of the Welsh counties showed an increase in their stock of lambs, Cardigan being the principal exception. In Scotland, as the result of increases in twenty counties (Aberdeen 5,569, Berwick 5,534, and Fife 5,358, being foremost), and decreases in thirteen (Perth 7,915, Inverness 6,191, Argyll 5,192), the total number of lambs showed very little variation from last year's figure.

The rise in the price of wool which, during the past two or three years, has gladdened the hearts of flockmasters, is perhaps mainly accountable for the increase of sheep which has taken place since 1904; indeed, it is a matter of some surprise that its effect has not been larger. Taking the number of ewes kept for breeding as the criterion, it is noticeable that the addition in two years to the ewe flock of Great Britain, notwithstanding the improvement in the wool trade, has not exceeded 180,000, an increase which has more than once been exceeded in a single year when no such unusual influence was operating. Thus in 1896, 260,000, and in 1899 no fewer than 320,000 were added in one season. The fluctuations which have taken place in the numbers of breeding ewes in England, Wales and Scotland respectively, since 1893, when this class was first separately distinguished in the Returns, are shown in the following diagram.

The curves represent the percentage change in each year as compared with the average number returned in the first three years, 1893-5, which is taken as 100 for each country. The actual figures appear in Tables XIX. to XXII.

Sows kept for breeding exhibited only casual variations, resulting, on balance, in a slight increase of 1,314 in Great Britain. In other pigs there was a decline of 102,772, or 4.9 per cent., as compared with last year. Practically, the whole of the net reduction occurred in England, where only four counties materially increased their stock of pigs, the largest addition being that of Chester, 2,834. On the other hand, four Eastern counties alone, viz. :—Essex, Lincoln, Norfolk and Suffolk, lost in the aggregate nearly 38,000 head of swine since the previous enumeration. The present decrease of 101,458 pigs in Great Britain, following on the reduction recorded last year, brought the total half-a-million below 1904, but it may be added that even with this considerable reduction, the number of pigs was still higher than it was as recently as 1902,

Taking the Sows kept for breeding as the most stable element of this very unstable class of stock, the changes which have occurred within the past six years may be shortly recapitulated as follows :—

YEAR.	ENGLAND.	WALES.	SCOTLAND.	GREAT BRITAIN.
1901	268,909	35,446	15,369	319,724
1902	295,237	36,826	16,937	349,000
1903	332,735	39,404	17,761	389,900
1904	327,904	36,621	17,531	382,056
1905	285,372	33,439	16,197	335,008
1906	284,950	34,480	16,892	336,322

Since 1901 there has been a marked falling off in the imports of bacon, hams and pork ; prices have, generally speaking, kept at a high level, and the demand for "pig products," except in so far as it may be checked by high prices, appears as active as ever. It would appear, therefore, that the conditions are favourable to an extension of pig-keeping in the near future.

In conclusion, I may sum up shortly the gains and losses of stock-owners in the year ending June 4th, 1906 :—

GAINS.		LOSSES.	
	No.		No.
HORSES :—		HORSES :—	
Unbroken Horses, one year and above	4,902	Horses used for Agricultural purposes and Mares for breeding purposes	5,914
CATTLE :—		Unbroken Horses under one year	2,740
Cows and Heifers in Milk or in Calf	31,019	CATTLE :—	
Other { Two years and above	11,437	Cattle under one year -	42,345
Cattle. { One year and under two	23,725	SHEEP :—	
SHEEP :—		Sheep (other than Ewes) one year and above	48,641
Ewes kept for breeding	125,338	PIGS :—	
Sheep under one year -	86,467	Pigs other than breeding sows	102,772
PIGS :—			
Sows kept for breeding	1,314		

The balance may fairly be regarded as falling on the credit side of the account, in view especially of the fact that, in the case of Cattle, Sheep and Pigs, the breeding stock has been augmented, and on the whole, therefore, the results of the farm-stock census of 1906 may be deemed to be fairly satisfactory.

I have the honour to be, Sir,

Your obedient Servant,

R. H. REW.

13th November, 1906.

(c) Not including Mountain and Heath Land. The apparent changes in the area under grass in Ireland, as compared with 1905, are largely due to greater care in classification, and to the transfer of some grass land from one category to another, or to a new item, "grazed mountain land." The area of this latter was returned at 2,244,205 acres in Ireland in 1906.

LIVE STOCK, on the 4th June, 1906, and 5th June, 1905, in GREAT  
IRELAND, and the UNITED KINGDOM.

TABLE XXIV.—RATEABLE VALUE of AGRICULTURAL LAND in ENGLAND and WALES as defined by the Agricultural Rates Act, 1896 (c).

*Extracted from the Annual Local Taxation Returns of the Local Government Board.*

Year.	London.	County Boroughs.	Other Administrative Counties.		Total.
	£	£	£		£
1897	31,492	300,803	24,010,325		24,342,620
1898	30,677	315,171	23,814,484		24,160,332
			Urban.	Rural.	
1899	29,271	323,929	2,852,577	20,828,926	24,034,703
1900	25,893	335,910	2,857,830	20,755,690	23,975,523
1901	23,479	351,430	2,846,644	20,725,894	23,947,447
1902	21,964	358,437	2,843,485	20,662,109	23,885,995
1903	21,095	362,019	2,834,388	20,611,104	23,828,606
1904	19,798	358,453	2,838,036	20,551,742	23,768,029
1905	18,752	383,895	2,821,920	20,512,021	23,736,588

*Notes to Table XXIII.*

(a) These figures refer to "lands," whether cultivated or uncultivated, including ornamental grounds, gardens attached to houses when exceeding one acre in extent, tithe-rent charge commuted under the Tithe Commutation Acts, farm-houses and farm-buildings.

(b) The rateable value of "lands" according to the Union Assessment Lists was ascertained for each county in England and Wales in 1870, 1894, and 1899, and the above figures are given in H.L. 150 of 1900. "Lands" include "agricultural lands" as defined in Section 9 of the Agricultural Rates Act, 1896; and also other lands, farm-houses and farm-buildings, tithe-rent charges and uncommuted tithes, but excluding lands occupied as railways, canals, etc.

*Note to Table XXIV.*

(c) "Agricultural land" as defined by Section 9 of the Agricultural Rates Act means any land used as arable, meadow or pasture land only, cottage gardens exceeding one quarter of an acre, market gardens, nursery grounds, orchards or allotments, but does not include land occupied together with a house as a park, gardens other than aforesaid, pleasure grounds or any land preserved mainly or exclusively for purposes of sport or recreation. It is exclusive of farm-houses and farm-buildings, tithe-rent charges and uncommuted tithes.
